

## Customer Case Study

# SecureCheck Significantly Increases Security, Productivity and Cost-Savings for Lynchburg College

## SecureCheck-PRO™

Lynchburg College has a national reputation as an institution that offers quality educational opportunities while building the character and the leadership ability of its students. The college employs 600 people and produces an estimated 1,500 checks per month. Lynchburg College has been using the SecureCheck MICR check printing system since 2006. The SecureCheck system is installed on a Windows operating system and automates printing for accounts payable, payroll, and student refund checks.

### **Business Situation**

Lynchburg College was using an antiquated check printing system that utilized a dot-matrix printer and made check issuance a labor-intensive, manual process. The required 3-ply continuous feed check form was very expensive and the printer would often break down. After the checks were printed, the forms had to be run through yet another machine for signatures. Seeking to improve efficiency and reduce costs, Lynchburg College sought out a new solution.

### **The Solution: SecureCheck**

After comparing different check printing systems, Lynchburg College chose to implement the innovative SecureCheck solution for its ease-of-use, ability to reduce costs and increase productivity. The SecureCheck MICR check printing software functions as a one-pass system, which eliminated many tedious steps involved in the process Lynchburg College previously had in place. By printing to blank check stock, rather than pre-printed stock, the college was able to increase security while reducing costs associated with check issuance. Additionally, SecureCheck's unparalleled internal controls such as user security permissions, audit capabilities and printed-stub information were key features that led to the decision to implement SecureCheck.

The system has allowed the accounting staff within the college departments to exponentially increase their efficiency and productivity. While discussing how SecureCheck has improved their process, John Lewis,

*"SecureCheck is such a great improvement over our previous check printing system. The laser printer is faster, easier and now it's a one-step process. For the end-user, the system is seamless. This is a strong solution for any educational institution or business."*

*- John Lewis, Associate Vice President for Business and Finance, Lynchburg College*

Associate Vice President for Business and Finance, states, "SecureCheck has improved our check printing because it is without a doubt a faster, simpler process. Everything is done in one step!" John also went on to say, "The security features in SecureCheck make it much harder for anyone to falsify a check, especially combined with the high-security check stock [TruPrint from AP Technology] we use." SecureCheck has been easily integrated with the college's Jenzabar PX software and has greatly improved the check printing process.

### **About AP Technology**

AP Technology is one of the original pioneers of MICR laser check printing systems. AP Technology develops leading solutions for MICR laser check printing (SecureCheck), positive pay (SecurePay), secure signatures and graphics (ezSigner), and MICR toner and blank check stock (TruPrint).
